

Cash Systems Launches Smart Processing Solutions(TM)

Cash Systems, Inc. CKNN, a provider of cash access solutions for the gaming industry, announced today that it has launched Smart Processing Solutions(TM) via the transformation of its acquiring platform to deliver premier customer service. Through the integration of advanced transaction routing capabilities developed by Smart Processing Suite Inc., a division of the TNS Group of Companies, Cash Systems will gain more control over processing of its cash access solutions.

Michael Rumbolz, Chairman and Chief Executive Officer of Cash Systems stated, "We continue to be the industry innovator through the introduction of new products and services that enhance our customers' profitability. This switching capability will allow us to process all of our own transactions thereby reducing costs we currently incur from third parties. We expect to begin seeing benefits in the fourth quarter and particularly in 2007."

The enhanced acquiring and reporting platform supports an advanced application engine offering high-speed transaction processing capable of flawlessly switching transactions. Furthermore, advanced communications and messaging capabilities enable the system to be directly connected to an endless variety of networks and applications offering more flexibility in delivering new products and services to its gaming customers such as totalcash, cashclub(TM), stay-n-play and powercash, the soon-to-be introduced line from the Company's joint venture with Bally Technologies and Scotch Twist.

"Casino customers are the most demanding in terms of their transactional and uptime requirements and with these new enhancements, customers of Cash Systems will see long term benefits of Cash Systems gaining more control of its transactional and loyalty processing," stated Mischa Weisz, President and CEO of Smart Processing Solutions Inc.
