FOR IMMEDIATE RELEASE

“Smart” Processing Solutions to be demonstrated at ATMIA.

Smart Processing Solutions and DPL Group partner at ATMIA Miami, Florida to demonstrate wireless ATM security monitoring and ATM transaction processing solution.

Toronto, Ontario, Feb 5th, 2005 – Smart Processing Solutions Inc., (SPS) a proven financial transaction solution provider, has partnered with DPL Group (DPL) to demonstrate GPRS wireless communication for ATM transactions and 24/7 ATM security monitoring.

DPL Group, a manufacturer and developer of wireless monitoring applications has partnered with SPS through it’s sister processing company in the United States; SPN Processing Network (SPN.) Working in tandem, Smart Processing Solutions and SPN deliver industry leading processing solutions to Independent Sales Organization (ISOs) and Financial Institutions (FIs).

Will Kelly, Director of the DPL Group commented that “We are delighted to report that several ATM deployers have now gone live with the DPL solution and they are successfully processing transactions.”

The Hercules 1000 system resides undetected inside an ATM, dispatching alarms to appropriate personnel based on warning signs that the machine is being tampered with: the door to the ATM being opened, the ATM being tilted or power to the ATM being disconnected.

Mischa Weisz, President and CEO of SPN Processing Network, stated “Since its introduction in the summer of 2004, the DPL solution has gained momentum. As a processor, we are pleased to approve this timely solution.”

Smart Processing Solutions Inc. delivers simple, proven, secure processing solutions coupled with superior customer service and support. The company’s flag-ship product, the Smart Processing Suite™, a proven in-house transaction processing solution, currently drives close to 20,000 ATMs across North America.
